INITIAL CONDITION: A-party is busy with a call and subscribes to DND, CF, and CW. An operator activates AEO and calls the A-party (i.e. AEO has set a persistent trigger condition at the "SUBSCRIBER BUSY" trigger point).

TRIGGER POINT: SUBSCRIBER BUSY (A-party)

STEP (1) Determine features which could trigger at this trigger point based on Trigger Point Table, subscribed features, requested features and persistent features.

---	---	---	---

FIG. 8c

STEP (2) Block features based on active features.

The RESULT above remains unchanged since there are no active features on the called line.

FIG. 8d

STEP (3a) DO WHILE there are features to trigger

SEARCH (RESULT bit map) = AEO (AEO is most significant bit set to Y)

STEP (3b) Trigger highest priority feature (based on Trigger Point Table lookup)

Based on trigger point table entry for the AEO, feature operation 1 is performed; AEO software is triggered which controls termination to the A-party.

STEP (3c) Block features based on newly triggered feature

NEW RESULT

At this point the NEW RESULT bit map is empty indicating no further feature triggers are required.
